Feedback from Peers

- o Navigation
  - ➤ It is easy to open, and it is easy to navigate from one page/section to another
  - ➤ Explanation of SDG page and abbreviation
  - ➤ Non consistent navigation
  - ➤ Missing links to some pages
  - ➤ Make Main Nav collapsible
  - ➤ It is easy to access the links in this prototype. User did not encounter any issues while working on the links
- o Design
  - ➤ More signifiers needed
  - ➤ Separate and indicate what is interactive and what is just information
  - ➤ The titles and headings are clear and informative. It is easy to find the specific sections quickly
  - ➤ The way prototype is designed with carousels, buttons is easy to follow and understand. It would be better to increase the font size so that people of every age group can use this website
  - ➤ The graph is easy to understand, and it is easy to differentiate as well
  - ➤ It is easy to navigate through the image gallery, but it would be better to add arrows or other type of signifier so that users can view the picture they want
- o Structure
  - ➤ The article was well organized, and it is easy to follow. The pointers sections are also helpful in finding specific sections. The goal of the project is to replace the pdf report to a webpage, but you did both. It is a great idea but it's better to put all idea into the webpage and it is better to remove the pdf
  - ➤ Combine Regional page and UN goals page
  - ➤ Make the prototype more filterable by choosing a region and UN goal which generates info

Reflection

Overall, the prototype has good navigation system that is easy to use and understandable to all users. Some encountered problems with navigating from one page to another which will be fixed in the following prototype. Comment about the SDG page helped us to make the prototype more user friendly by explaining the abbreviation and definition since not everyone is familiar with this term.

Design of current prototype is missing signifiers that prevents user to experience the prototype to its full capability. Also, interactive images or text should be distinguishable among other elements to get user's attention. These two points will be implemented in further development. Since prototype is designed with numerous charts, carousels, pictures, buttons that examiners found useful, our team will put more effort in making it more readable and understandable for users and making font size adjustable for every user. Signifiers like arrows to navigate through image gallery will be added to accommodate user to look through information that suits his/her requirements.

Regarding link to pdf report from a webpage, our teams will leave it at its current state because this prototype would not be able to fully replace the data that SSCF provides and if users would need

more detailed explanation for the data provided, they would be able to access it through the link. As for filtering options and browsing through information, it would be added at the next prototype and implemented so it would suit customer requirements.
